

Nate Woodward

LC T P Spring symposium: Theoretical Physics and AI

Lots of progress, but how?

- Significant AI progress in theory
- Often only see the final result

{Insert your favorite AI benchmark}

Performance

Time

Our driving questions:

1. How do models learn physics?

2. What changes when models perform better on physics problems?

Our approach: Fine-tune models on QFT and investigate their development

Lots of progress, but how?

- Significant AI progress in theory
- Often only see the final result

Our driving questions:

1. How do models learn physics?
2. What changes when models perform better on physics problems?

Our approach: Fine-tune models on QFT and investigate their development

What is *fine-tuning*?
